

ANTIMICROBIAL PROTECTION built in to protect the film

ALWAYS CLEAN ALWAYS ON

Silver Defender products have **built in antimicrobial protection** to guard against degradation from microorganisms.

Our products contain an **antimicrobial agent to protect the film from bacteria, mold, mildew and fungi** to ensure the product is clean. Silver ions react with and affect multiple sites in bacterial cells on the surface of the film, to **keep the film clean**.

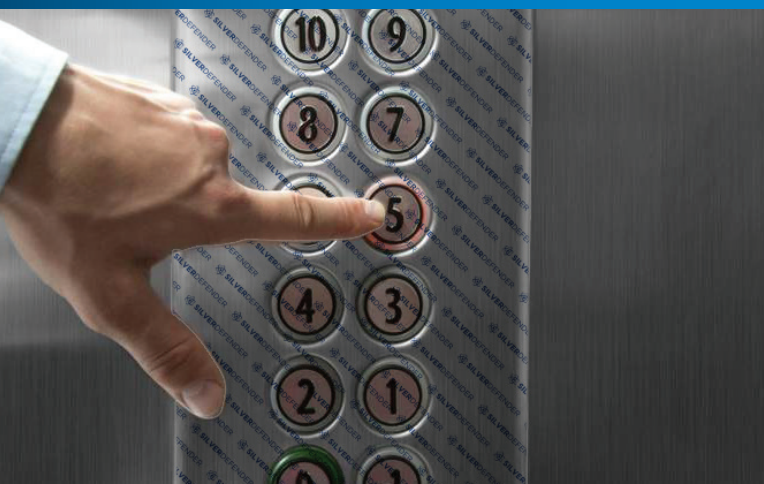

Cleaning power **activated by light, air pressure and the touch of a hand**.

Silver Defender is a **patent pending**, specifically designed, high-quality film, which can be **applied to any surface for all industries**.

Silver Defender **stretchable films** can cover **any type of surface**.

Developed for **high traffic areas**.

Our films are **waterproof and resistant to most cleaning products**.

EASE OF USE

Applied and removed in seconds.
Use up to 90 days.

NON-IRRITABLE

Nontoxic and safe for anyone to touch.

How to apply Silver Defender Tapes

1

Make sure the surface is clean and dry before application. Use the perforations to tear tape to size.

2

Remove a small strip from either edge of the back paper liner, then adhere.

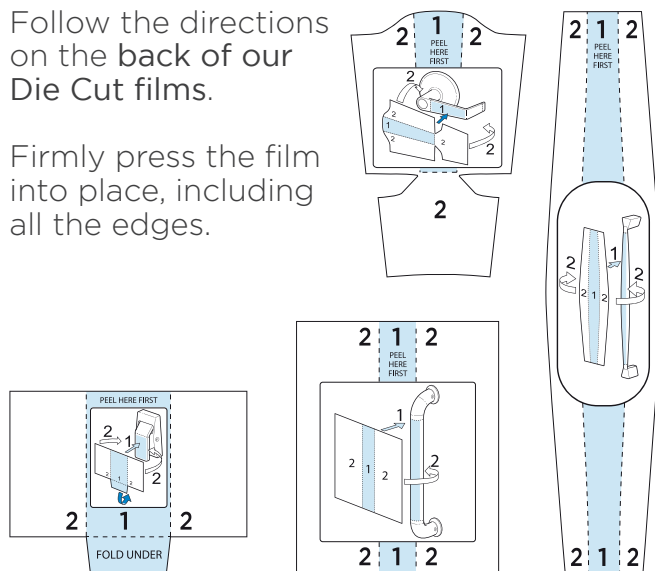

3

Remove the large middle liner and adhere. Finally, remove the last liner and adhere. Firmly press the film into place, including all the edges.

Silver Defender Die Cut Instructions

Follow the directions on the back of our Die Cut films.

Firmly press the film into place, including all the edges.
