

PROTECT CRITICAL MATERIALS AND SAVE MONEY

WITH NORTH SLOPE CHILLERS AND FLUX WRAP

125° F

External Ambient Temperature

-\$5,000/drum

A large manufacturing company was losing up to eight 55 gallon drums of varnish, epoxy, and resins per week due to the hot humid conditions at their plant.

The chiller pumps cooling fluids into the circulation blanket and wraps the drum in constant cool. Using Powerblanket's patented heat-spreading technology in reverse, the cooling blanket draws heat away from the drum and lowers the temperature of the contents within. When combined with our portable industrial chillers, you can maintain temperatures as low as 20°F/-7°C.

125° F

External Ambient Temperature

Powerblanket supplied chillers and circulation blankets to stage on the production line and eliminated their material losses, saving them

+\$40,000/week.
