

INTERLAKE MECALUX PALLET RACK BACKSTOPS

The Interlake Mecalux **pallet rack teardrop backstops** prevent the pallet or load from being pushed too far within the pallet rack system.

The backstop is a single piece that does not require accessories, since it is directly fastened to the teardrop pallet rack upright frames with a piston lock on each end.

Piston Lock Design

- Simple piston lock design to connect to teardrop pallet rack upright frames.
- No additional hardware required to connect to either blue bolted or green welded pallet rack upright frames.

Standard Dimensions

- Load offset
 - 0", 3", 4" and 6".
- Lengths
 - 48", 96", 108", 120" and 144".
