

52" Metal Detectable Mixing Paddle

Series 6777MD

Remco

One-Piece Construction

The one-piece construction on this polypropylene with semi-ferrous additive paddle is hygienic and FDA-compliant

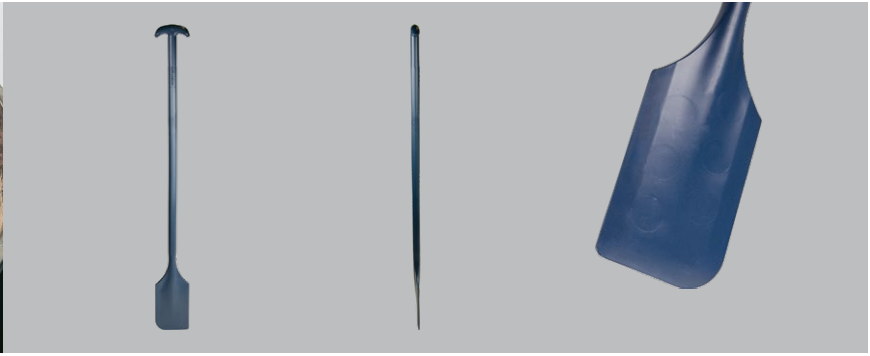

Metal Detectability

Semi-ferrous additives make this piece able to be picked up by most metal detection equipment, depending on machine calibration and sensitivity

Unique Paddle Shape

The paddle shape makes this tool useful as a scraper or as a mixer

This two-in-one tool is handy for both mixing and scraping, and is great for a variety of applications such as soup, confectionery, dough, and sauce manufacturing as well as many other food processing or other mixing tasks. One-piece construction and the unique long-handle design make it easy to use for many jobs. The semi-ferrous additive in this paddle allows for use in conjunction with a metal detectable system. Metal detectable plastic is a lightweight and less costly alternative to stainless steel mixing paddle scrapers, and will reduce fatigue for the user.

52" Metal Detectable Mixing Paddle

6777MD

Remco's metal detectable paddles contain more semi-ferrous additives than most on the market, making it easier to detect, depending on machine calibration and sensitivity. The design is ergonomically friendly and multi-purpose, as it can be used as a mixer or a scraper.

Specifications:

Length: 51.7"

Width: 6"

Height: 1.4"

FDA-Compliant Raw Material: Yes

Material: Polypropylene with semi-ferrous additive

Unit Weight: 3.63 lbs.

Deflection / Softening Temps: 183°F / 266°F

Colors

When ordering, add the color digit to the base part number to denote color.

The Color-Coding System

Remco and Vikan® brands offer an integrated color-coding system to help mitigate the risk of cross-contamination in food processing facilities. With an array of color-coded tools and storage brackets, and years of experience building effective color-coding systems, the experts at Remco Products Corporation can help you effectively apply color-coding to divide and identify different zones or processing tasks. As a result, workers can more easily comply with material handling and hygienic cleaning procedures to maintain stringent food safety standards.
