

Front-line solution to mitigate the spread of the Coronavirus/COVID-19

We believe the health of all Americans, especially those most susceptible to the Coronavirus, is of paramount importance. The Power Breezer offers a dispersment mechanism to disinfect large areas against the Coronavirus by utilizing its atomizing technology to convert water soluble EPA or CDC recommended disinfectants to vapor and blowing the cleansing vapor up to 65 feet in a 60 degree cone.

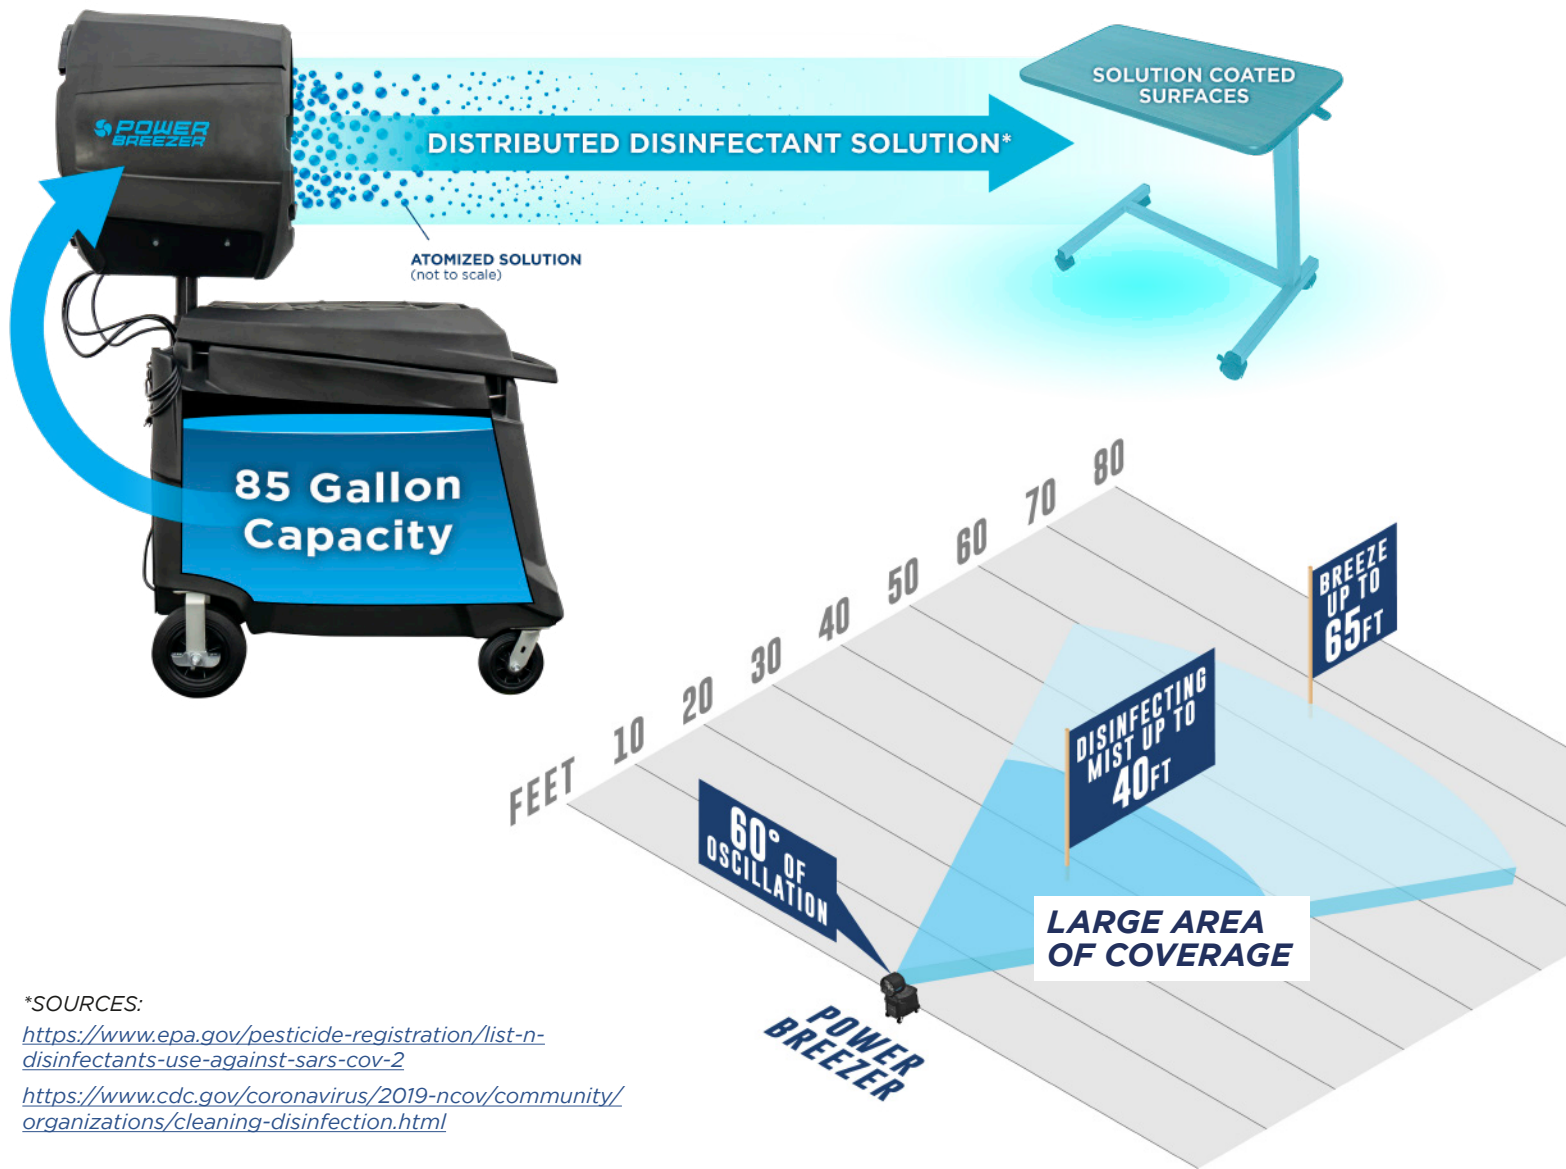

Putting a layer of cleansing vapor over open areas with tables, equipment, racks, conveyors and other surfaces that will be continually touched can help disinfect and mitigate the future spread of COVID-19. Immediate needs include warehouses, cafeterias, logistics areas, luggage handling, humanitarian applications, corrections facilities, manufacturing facilities, and cargo ports.

Power Breezers are extremely deployable and self contained. As Health Experts confirm new liquid disinfectants, the unit's 80 gallon built-in tank is designed well to help disperse additional water soluble disinfectant solutions.

Power Breezers are currently in nationwide use by the U.S. Military, Fortune 500 Companies, dozens of Professional and College Sports Teams, with tens of thousands available immediately for implementation by the National Guard, U.S. Military, National Rental Companies, and Industrial Suppliers Nationwide.

EPA/CDC has 3 requirements for the Power Breezer integrated solution to disinfect for Coronavirus.

1

Fill the Power Breezer tank with the **disinfectant/water mix per EPA/CDC guidelines**

2

It must **create a film on the surface area**

3

It must have a **dwelt time on the surface for 10min or EPA/CDC guidelines**

SAFEGUARDS:

- Do not mist directly on people and ventilate area after dispensing.
- Follow disinfectant manufacturer and EPA/CDC guidelines for usage, efficacy, safety, and all protocols.
- Be careful of slip hazards due to water solution layer on floors and equipment.
- To mitigate the corrosive effects on the Power Breezer, we recommend a weekly running only water through the unit.
- This is intended as a mitigation tool, and not as a one stop solution to COVID-19/ Coronavirus.
