Seal Poly Bags Effortlessly in One Swift Motion

- Cost effective
- Tamper proof packaging
- Easy to use
- Efficient
- Durable

Video Demo →

These bag tape sealers provide a simple and economical solution for closing poly bags with PVC packaging tape. Capable of sealing up to 2,000 bags per hour, they use only 2 inches of tape per seal, making them highly efficient.

Constructed entirely from steel, each dispenser features pre-drilled holes in the base for easy mounting to a work surface. They also include a built-in bag cutter for trimming excess poly bags. With no assembly or maintenance required, the standard sealers come with a 3/8" throat, while the SL-808K model offer a wider 5/8" throat. Simply place the PVC tape on the 3" core wheel, and it's ready for immediate use.

To seal a bag, twist the mouth of the poly bag and slide it through the slot (throat) in a downward motion. The tape instantly wraps around the bag neck and trims itself automatically. For bags with excess material, continue the downward motion to pass the bag through the built-in trimmer.
