

Global Industrial™ Disposable Aprons and Sleeves

Aprons are designed for spill protection in food service, medical, and laboratory environments. The polyethylene coated polypropylene construction is both durable and fluid resistant for moist or wet work applications. Disposable design for maintenance ease.

Sleeves are ideal for material handling in wet conditions including medical, food service, laboratory, and more. The **polypropylene** sleeves provide dry particle resistance against dust, debris, and other non-hazardous particles. The **microporous** sleeves are constructed from 60% polypropylene and 40% polyethylene, providing moisture and spill resistance against non-hazardous particles, light splashes, and aerosols. The triple stitched seam improves sleeve strength. Includes an elastic opening for easy sleeve access and removal. Disposable for maintenance ease.

Model	Description	Construction	Size Inches	Qty. Per Case
708206	Sleeves	Microporous	18	200
708207	Sleeves	Polypropylene	18	200
708311	Apron	Polypropylene/Polyethylene	36	100
