**Hazard:** When first filling the recalled generator with gasoline, fuel can leak from the carburetor posing a serious risk of injury or death from fire or burn hazard. Consumers with generators that have previously been filled with enough gasoline to move the gauge off "E," or have been used without any gasoline leakage, can continue use.

**Remedy:** If you own a generator with a serial number in the affected range, please stop using the portable generator immediately, and contact Generac to obtain a free dealer repair.

**For More Information:**

**(800) 396-9951**

Monday through Friday 8:00 a.m. to 5:00 p.m. C.T.

<https://www.generac.com/about/recalls/GP-Carburetor>

**This recall is being conducted in cooperation with the U.S. Consumer Product Safety Commission and Health Canada.**

Post Until August 1, 2026

## **IMPORTANT SAFETY NOTICE – STOP SALE**

Dear Valued Retail Partner:

The purpose of this letter is to inform you that Generac will be announcing a voluntary safety recall of certain Generac portable generators. This recall will be undertaken in cooperation with the U.S. Consumer Product Safety Commission and Health Canada.

This recall is being conducted to address a risk that the unit may leak fuel around the carburetor when filled with fuel for the first time, posing a fire hazard.

A list of the specific affected models is attached to this letter, as this recall does not apply to all Generac portable generators. Please note that it will be necessary to check specific serial numbers to determine whether it is an affected unit. Only those units falling within the noted serial ranges are impacted by the recall. Units with serial numbers outside the noted serial range are not subject to this recall.

Generac will be offering consumers a free remedy.

To ensure the safety of your customers, please check your inventory to see if you have any of the affected products specifically called out in this letter. If you locate any affected products, please stop any further retail sales of these specific products, effective immediately, and email our carrier CH Robinson at [GeneracReturns@chrobinson.com](mailto:GeneracReturns@chrobinson.com) to arrange for the products to be picked up. Alternatively, you may also contact the Generac recall hotline at 866-578-7533 and reference "Generac GP Portable Recall". When contacting our carrier, please have the following information available: quantity of units; pallet spaces; pick up location; pick up hours; whether a liftgate is needed; and contact information.

Please stop any further retail sales of these specific products, effective immediately. Please note that compliance with this Stop Sale may be monitored by Health Canada for our Canadian partners.

If you have affected models in inventory, Generac will be partnering with you to provide comparable portable replacement generators that are not impacted by this Stop Sale or that already have been reworked to incorporate the remedy.

We regret any inconvenience this may cause to you or your customers, however we have found it necessary to take these steps to ensure the safety of your customers. Thank you for your cooperation and if you have any questions, please contact your Generac Sales Representative or 1-888-Generac (436-3722), or email at [retailcustomersupport@generac.com](mailto:retailcustomersupport@generac.com).

Thank you,  
Generac Sales Team

# IMPORTANT RECALL NOTICE

## Generac Portable Generators

Dear Valued Customer:

Generac is conducting in cooperation with the United States Consumer Product Safety Commission (CPSC) and Health Canada a recall with the Generac Portable Generators due to a fuel leak issue. Our records show that you may have purchased a recalled portable generator between May 2025 and March 2026.

### Description of Hazard

When first filling the recalled generator with gasoline, fuel can leak from the carburetor posing a serious risk of injury or death from fire or burn hazard. Consumers with generators that have previously been filled with enough gasoline to move the gauge off "E," or have been used without any gasoline leakage, can continue use.

### Affected Portable Generators

This recall involves certain Generac Portable Generators with the following unit types and model numbers, within a limited serial range: Unit type GP3600 (model G0077210); GP4000DF (model G0081550); GP6500 (models G0076802, G0076722); GP6500E (model G0077130); GP6500EDF (model G0081530); GP6700EDF (model G0080620); GP8000E (models G0077150, G0076754, G0081540); GP9200E (model G0079712); and GP9500ETF (model G0080630).

***A list of the specific affected models and serial numbers is attached to this letter at page 3. Please note that it will be necessary to check specific serial numbers to determine whether your unit is affected.*** Only those units falling within the noted serial ranges are impacted by the recall. Units with model or serial numbers outside the noted serial range are not subject to this recall.

“Generac” and the unit type are printed on the control panel side of the generators. The model and serial number are printed on a label adhered to the side of the alternator or on the frame cross member. You can also visit <https://www.generac.com/about/recalls/GP-Carburetor> to see if your specific unit type, model number, and serial number are included in this recall.

## IMPORTANT RECALL NOTICE

### What should you do?

Consumers should immediately stop using the recalled Generac portable generator and go to <https://www.generac.com/about/recalls/GP-Carburetor> to check to see if your model and serial number are included in this recall or go to page 3.

If your unit is included in the recall and has either not yet been filled with fuel or exhibited leakage after fueling as described above, please contact your dealer to arrange for free repair at the dealer's location.

Note: Consumers should ensure the fuel valve is turned on when filling the tank for the first time after purchase and then check if fuel level gauge moves past "E" [empty] to determine if unit is defective and subject to recall. The valve must be turned on to ensure fuel flows past the valve and into the fuel inlet of the carburetor to be able to detect a fuel leak.

Once repaired, please make sure to follow all on-product and in-manual warnings regarding proper operation, refueling, and ventilation for the generator. Please also make sure to follow in-manual maintenance procedures and fuel storage instructions.

If you still own one of the affected portable generator models, you may request the free repair remedy, online at <https://www.generac.com/about/recalls/GP-Carburetor> or [www.generac.com](http://www.generac.com) and click on "Important Recall Information." You may also contact Generac toll free at (800)-396-9951 from 8 a.m. to 5 p.m. CT Monday through Friday, to request the remedy. Please have your unit type, model, and serial number available so that we can process your request.

Thank you for your support and cooperation. We sincerely apologize for any inconvenience this recall may cause.

Sincerely,

Generac Power Systems
